

## INTENDED USE

This FRP rung insert is designed to be used with our SmartCleat® portfolio. It ensures a secure installation of the cablecleat to the rung to hold it during operation, and during short circuit events.

## INSTRUCTION FOR USE

1-2. The rung insert features an angled edge, which allows a snap-in assembly. Once the rung insert has been inserted into the rung it will not fall out, but the insert can slide along the length of the rung.

3. Once an appropriate location is chosen, the rung insert can be raised into the rung slotting. This locks it in position. NOTE - Clear any burr from the holes to ensure the adapter is fitted true to the rung.

4. The smart cleats can now be installed.

In case of special solution with bigger fixation bolt applied, this adapter can be used as a guide for drilling M10 holes into the cable ladder rung. For visualization see User guide: ØI-RD-UG-EN-0437.

Note: Use recommended torque from chosen cleat type user guide.
