

## INTENDED USE

ETIN™ Tubing Clamps for tubing 14-25 mm (5/8" - 1") for single tubes. They are quick and easy to install.

Designed to suit Oglænd System longitudinal slots.(Adapter brackets are available also for lateral slots).

## INSTRUCTION FOR USE

1. If needed, insert the correct adapter in the housing for the tubing diameter.
2. Open the clamp, and clip onto the cable tray or ladder.
3. Press the tubing into place. The plastic clamp jaw closes around the tubing and keeps it isolated from the steel jacket.
4. Bend the cover down and lock with the self locking bolt. Tighten until the cover clamp is shut. Typical torque is 2-4 Nm.
5. Two ETIN™ clamps can be clipped on top of each other. Remove the bolt and clip together. One longer self locking bolt is used to fix both clamps to the tray or ladder. Typical torque is 2-4 Nm.
6. The ETIN™ clamp fitted on SPBE trays provides optimal utilisation of the tray width. ETIN™ can also be fitted in Oglænd ladder systems.
