General information

Material specifications

- | | |
|----------------------|---|
| ① Threaded shank: | Stainless steel (S-BT-ER)
"S 31603 (1.4462)"
zinc-coated |
| ② Threaded shank: | Carbon steel (S-BT-EF)
"1038 / duplex-coated" |
| ③ SN12-R washers: | Stainless steel (S-BT-ER)
"S 31603 (1.4404)" |
| ④ AN10-F washers: | Aluminum (S-BT-EF)
Stainless steel (S-BT-ER)
grade A4 / AISI 316 material |
| ⑤ Nut: | Carbon steel (S-BT-EF)
HDG |
| ⑥ Nut: | Stainless steel (S-BT-ER)
grade A4 / AISI 316 material |
| ⑦ Lock washer: | Carbon steel (S-BT-EF)
HDG |
| ⑧ Lock washer: | Stainless steel (S-BT-ER)
grade A4 / AISI 316 material |
| ⑨ Conductivity disc: | Carbon steel (S-BT-EF)
HDG
Ø 22 mm [0.866"]
(HC 35/AWG2)
Copper alloy CuSn8
(tin-coated) with sealing ring |
| ⑩ Conductivity disc: | Ø 32 mm [1.260"]
(HC 120/AWG4/0)
Copper alloy CuSn8
(tin-coated) with sealing ring |

Sealing ring of
sealing washers: Chloroprene rubber CR
3.1107, black, resistant to
UV, salt water, water, ozone,
oils etc.

Conductivity discs: Resistant to UV, salt water,
water, ozone, atmospheric
conditions etc.

Drilling tool, setting tool, accessories and inserts

Refer to section **"Fastener selection and system
recommendation"** for more details.

Reports and type approvals

*) this items are available only on special request

Applications

Examples

Functional and protective bonding of pipes ^{*)}
(outer diameter of installed surface ≥ 150 mm)

^{*)} only for Type A cable connections

Protective bonding circuit – Double point connection

Functional bonding and terminal connection in a circuit

For permanent current (leakage current) due to static charge built up in pipes or when closing an electrical circuit.

Single point connection

Type A

Recommended electrical connectors:

S-BT-ER M10/15 SN 6
S-BT-ER W10/15 SN 6
S-BT-EF M10/15 AN 6
S-BT-EF W10/15 AN 6
S-BT-ER M8/15 SN 6
S-BT-EF M8/15 AN 6

Maximum allowable permanent current

$$I_{th} = 57 \text{ A}$$

Type B

S-BT-ER M10 HC 35^{*)}
S-BT-ER W10 HC AWG2^{*)}
S-BT-EF M10 HC 35^{*)}
S-BT-EF W10 HC AWG2^{*)}

$$I_{th} = 125 \text{ A}$$

S-BT-ER M10 HC 120
S-BT-ER W10 HC AWG4/0
S-BT-EF M10 HC 120
S-BT-EF W10 HC AWG4/0

$$I_{th} = 269 \text{ A}$$

Note:

- Recommended maximal cross section of connected cable according **IEC 60947-7-2** and **IEC 60947-7-1**:
10 mm² (8 AWG) copper (tested permanent current $I_{th} = 57$ A)
35 mm² (2 AWG) copper (tested permanent current $I_{th} = 125$ A)
120 mm² (4/0 AWG) copper (tested permanent current $I_{th} = 269$ A)
- Fastening of thicker cable is acceptable, if the maximum allowable permanent current I_{th} is not exceeded and the provisions on cable lug thickness t_{cl} are observed.

^{*)} this items are available only on special request

Protective bonding circuit

For discharging short circuit current while protecting electrical equipment or earth / ground cable trays and ladders.

Single point connection

Recommended electrical connectors:

S-BT-ER M10/15 SN 6
S-BT-ER W10/15 SN 6
S-BT-EF M10/15 AN 6
S-BT-EF W10/15 AN 6
S-BT-ER M8/15 SN 6
S-BT-EF M8/15 AN 6

Max. short circuit current according to IEC and UL

$I_{CW} = 1.20 \text{ kA}$ (IEC)
 $I_{CW} = 0.75 \text{ kA}$ (UL)

S-BT-ER M10 HC 35*)
S-BT-ER W10 HC AWG2*)
S-BT-EF M10 HC 35*)
S-BT-EF W10 HC AWG2*)

$I_{CW} = 4.20 \text{ kA}$ (IEC)
 $I_{CW} = 3.90 \text{ kA}$ (UL)

S-BT-ER M10 HC 120
S-BT-ER W10 HC AWG4/0
S-BT-EF M10 HC 120
S-BT-EF W10 HC AWG4/0

$I_{CW} = 14.40 \text{ kA}$ (IEC)
 $I_{CW} = 10.10 \text{ kA}$ (UL)

Note:

- Recommended maximal cross section of connected cable according **IEC 60947-7-2** and **IEC 60947-7-1**:
10 mm² (8 AWG) copper (tested short circuit current $I_{CW} = 1.20 \text{ kA}$ for 1 s)
35 mm² (2 AWG) copper (tested short circuit current $I_{CW} = 4.20 \text{ kA}$ for 1 s)
120 mm² (4/0 AWG) copper (tested short circuit current $I_{CW} = 14.40 \text{ kA}$ for 1 s)
according **UL 467**:
10 AWG copper (tested short circuit current $I_{CW} = 0.75 \text{ kA}$ for 4 s)
2 AWG copper (tested short circuit current $I_{CW} = 3.90 \text{ kA}$ for 6 s)
4/0 AWG copper (tested short circuit current $I_{CW} = 10.10 \text{ kA}$ for 9 s)
- Fastening of thicker cable is acceptable, if the maximum short circuit current I_{CW} and the exposure time is not exceeded and the provisions on cable lug thickness t_{cl} are observed.

Double point connection

Recommended electrical connectors:

S-BT-ER M10/15 SN 6
S-BT-ER W10/15 SN 6
S-BT-EF M10/15 AN 6
S-BT-EF W10/15 AN 6
S-BT-ER M8/15 SN 6
S-BT-EF M8/15 AN 6

Max. short circuit current according to IEC

$I_{CW} = 1.92 \text{ kA}$ (IEC)

*) this items are available only on special request

Note:

- Recommended maximal cross section of connected cable according **IEC 60947-7-2 and IEC 60947-7-1**:
16 mm² (6 AWG) copper (tested short circuit current $I_{CW} = 1.92$ kA for 1 s)
- Fastening of thicker cable is acceptable, if the maximum short circuit current I_{CW} and the exposure time is not exceeded and the provisions on cable lug thickness t_{cl} are observed.

Lightning protection

For high temporary current due to lightning.

Single point connection
Classification N

(acc. IEC 62561-1)

Type A

Recommended electrical connectors:

S-BT-ER M10/15 SN 6
S-BT-ER W10/15 SN 6
S-BT-EF M10/15 AN 6
S-BT-EF W10/15 AN 6
S-BT-ER M8/15 SN 6
S-BT-EF M8/15 AN 6

Maximum lightning current

$I_{imp} = 50$ kA for ≤ 5 ms
 (according to IEC 62561-1)

Type B

S-BT-ER M10 HC 35*)
S-BT-ER W10 HC AWG2*)
S-BT-EF M10 HC 35*)
S-BT-EF W10 HC AWG2*)
S-BT-ER M10 HC 120
S-BT-ER W10 HC AWG4/0
S-BT-EF M10 HC 120
S-BT-EF W10 HC AWG4/0

Classification H

(acc. IEC 62561-1)

Type B

Recommended electrical connectors:

S-BT-ER M10 HC 35*)
S-BT-ER W10 HC AWG2*)
S-BT-EF M10 HC 35*)
S-BT-EF W10 HC AWG2*)
S-BT-ER M10 HC 120
S-BT-ER W10 HC AWG4/0
S-BT-EF M10 HC 120
S-BT-EF W10 HC AWG4/0

$I_{imp} = 100$ kA for ≤ 5 ms
 (according to IEC 62561-1)

*) this items are available only on special request

When S-BT-ER / -EF is used in class H applications only type B cable connection is allowed.

Tightening torque of 8 Nm must be observed accurately for type B cable connection.

Application Requirements

Base material thickness $t_{II} \geq 6 \text{ mm}$

Thickness of base material corrosion protection layer $\leq 0.8 \text{ mm}$ [0.0315"].

For single point connection type B conductivity disc must be in direct contact with non-coated base material.

Cable lug characteristics and connector types

Cable lug thickness t_{cl} and inner hole diameter d_2

Fastener	Single point connector		Double point connector

Spacing & edge distances

Edge distance:

Type A connector: ≥ 6 mm [0.236"]

Type B connector: ≥ 20 mm [0.787"]

Spacing:

Type A connector: ≥ 22 mm [0.866"]

Type B connector: ≥ 40 mm [1.575"]

Installation temperature and service temperature

The **installation temperature** is the temperature at which the S-BT studs are installed. A distinction is made between the temperature of the base material and the temperature of the S-BT studs, drilling and installation tools and accessories. The installation temperature range can be found in the table below.

The **service temperature** is the temperature at which the S-BT studs operate. The S-BT studs will operate effectively and without any loss in performance (loads, sealing function, etc.) within the specified service temperature range. Outside this temperature range the S-BT studs may fail.

Designation	Installation temperature		Service temperature	
	min	max	min	max
Base material	-40 °C	+60 °C	-40 °C	+100 °C
S-BT studs	-10 °C	+60 °C	-40 °C	+100 °C
Drilling & Installation tools and accessories	-10 °C	+60 °C	n.a.	n.a.

Note:

The service temperature range of the connected cable lugs and cables has to be observed. For details please contact the supplier of the cable lugs and cables. When using Hilti S-BT fasteners in combination with fire rated boundaries in Shipbuilding facilities, the max. service temperature for a period of 60 minutes is higher. For more details refer to section 5.10 "Fire resistance" in the S-BT Specification binder.

Corrosion information

The S-BT-ER stainless studs are made from the duplex stainless steel type 1.4462, which is equivalent to AISI 316 (A4) steel grade. This grade of stainless steel is classified in the corrosion resistance class IV according to DIN EN 1993-1-4:2015, which makes the material suitable for aggressive environments such as coastal and offshore applications.

The microstructures of duplex stainless steels consist of a mixture of austenite and ferrite phases. Compared to the austenitic stainless steel grades, duplex stainless steels are magnetic. The surface of the S-BT-ER stainless steel fasteners is zinc-coated (anti-friction coating) in order to reduce the thread forming torque when the stud is screwed in into the base material.

The coating of the carbon steel S-BT-EF fasteners consists of an electroplated Zn-alloy for cathodic protection and a top coat for chemical resistance (Duplex-coating). The thickness of the coating is 35 µm. This product is designed for use in corrosive categories C1, C2 and C3 according to the standard EN ISO 9223.

The conductivity disc of the S-BT-ER / -EF HC is made from copper alloy CuSn8 with a tin-coating on the surface and a sealing ring on the bottom side. The copper alloy is classified as largely insensitive to stress corrosion cracking and pitting corrosion. The conductivity disc is designed for use in corrosion categories C1 - C5 according to EN ISO 9223. It is therefore suitable for use in aggressive environments like coastal and offshore applications.

To prevent corrosion of the base material due to the drilling process the following base material thickness t_{II} has to be given.

	Fastener	
	Carbon steel S-BT-EF	Stainless steel S-BT-ER
Corrosivity category C Corrosion resistance class (CRC)	C1, C2, C3	CRC III, IV
Base material thickness $t_{II}^{1)}$		
6 mm [0.24"] $\leq t_{II} < 7$ mm [0.28"] Pilot drill may cause damage to backside coating	✓	✓ ²⁾
$t_{II} \geq 7$ mm [0.28"] Pilot drill will not affect backside of base material	✓	✓

1) Real base material thickness, not nominal material thickness or material thickness with coating.

2) Damage of the coating on the back side of the plate / profile require a rework of the coating, if the drilling tools SF BT 22-A or SF BT 18-A were used for drilling the bore hole. If the tool SBT 4-A22 was used for drilling the bore hole, no damage of the coating on the back side of the plate / profile will occur.

Application limit

The base material is limited to steel grade with a maximum tensile strength $f_u = 630$ MPa [91 ksi].

The minimum tensile strength of steel is $f_u \geq 340$ MPa [49 ksi].

Minimum thickness of base material t_{II} : refer to section "Application Requirements".

Maximum thickness of base material t_{II} : no limits.

Fastener quality assurance

In order to ensure the exact screw-in depth and a proper compressed sealing washer, the S-BT studs have to be installed with the appropriate depth gauge. With this tool the screw-in depth can be adjusted in a range of 0 - 1.5 mm (3 steps, 0.5mm per step). The S-CC BT calibration card is needed to check the initial stand-off of the S-BT stud and to adjust/calibrate the S-DG depth gauge. After finding the right adjustment level for the S-DG depth gauge, the gauge can be adjusted and the studs can be installed without additional check of the S-DG depth gauge. The depth gauge has to be re-adjusted (calibrated) at following times:

- Start of the installation process
- Change of the working position (upwards, downwards, horizontal) and base material (thickness, strength, type)
- Installer change
- After each packaging respectively after the installation of 100 S-BT studs

The lifetime of the S-DG BT depth gauge is ≥ 1000 settings.

The installer is responsible for the correct setting of the S-BT studs.

For the periodical verification of the correct stud stand-off the S-CG BT check gauge can be used.

S-DG BT mechanical depth gauge

Design and functionality of the mechanical calibration card S-CC BT

Installation

Single point connection

Single point connection type A:

Single point connection type B:

For Type B cable connection the following requirements have to be observed:

- The conductivity disc must be in direct contact with the non-coated base material. Coating has to be removed with the coating removal drill bit.
- **Tightening torque of 8 Nm** must be observed accurately.

Double point connection

Double point connection type A:

Torque recommendation for all S-BT-ER and S-BT-EF

Single point connection type A and double point connection type A:

Single point connection type B:

The tightening torque is **8 Nm**. Exceeding or falling below this tightening torque value is not allowed. Tighten the nut using torque tool X-BT 1/4" (8 Nm), torque wrench or Hilti screw driver SBT 4-A22, SFC 18-A, SFC 22-A (torque setting 5) with socket S-NS.

Important: These are abbreviated instructions which may vary by application. ALWAYS review / follow the instructions for use (IFU) accompanying the product
