

Mekano® - Beam Clamps

## INTENDED USE

Bolted Brackets suitable for supporting directly from stringers. Can be used together with a range of brackets for light load support. The bracket is attached to the stringer with an M10 bolt. M10 fasteners on the side and bottom are used for attaching brackets or threaded bar.

## **INSTRUCTION FOR USE**

Measure and mark the position of the stringer brackets. Hook the bracket over the stringer edge, and tighten the tapered bolt securely.

Pressure plates are available to spread the clamping pressure area and avoid damage to the paint work. When supporting a traverse, at least one end must be independently locked off/secured.

The Stringer bracket is fitted with M10 bolt. Brackets or a threaded rod can be fitted using the M10 nuts on the side or bottom.

Optional Pressure Plates fitted under the tapered bolt on the top, to spread the clamping pressure and avoid damage to paint.
