

INTENDED USE

Mekano® CH100-4 is a square section heavy duty channel in 5 mm material thickness, suitable for piping support and for heavy electro, instrumentation and HVAC applications.

INSTRUCTION FOR USE

Mekano® CH100-4 channels are fixed together using M10 bolts with Oglaend anti-vibration nuts.

The bolts are fitted through the channel and connected with a range of brackets and splices. CH100-4 splices are designed with the Oglaend Nonie adjustment system which allows for adjustment when fitting in 5 mm increments.

Mekano® CH100-4 must be cut in 25 mm increments from the middle of two holes. Order our cutting jig for easy measurement. Attach the parts loosely with M10 bolts with Oglaend anti-vibration nuts, adjust and tighten securely.
