

## INTENDED USE

Corrosion Protection Paste (CPP) is a solvent free, non-drying corrosion protection paste used to protect the surface of Stainless Steel tubing surfaces from crevice corrosion and pitting, by ensuring contaminants cannot enter cavities and penetrate the passivation layer of the material. It is not necessary to use CPP on tubing of 254-SMO or 6MO qualities.

## INSTRUCTION FOR USE

Ensure the surfaces are free from debris.  
Using a brush, apply the CPP on the surfaces in contact with the tubing; on the adapters, the tubing and on the cover.

1L complete with application brush.

**Step 1:**  
Apply the CPP on the surfaces directly in contact with the tubing.

**Step 2:**  
Place the tubing in the clamp and apply CPP on the contact area between the tubing and the cover.

**Step 3:**  
Clip on the cover and fasten the bolt.
